

# CROSSFADE X

## OSSIUM SHELLS

## Harness the power of the Crossfade X

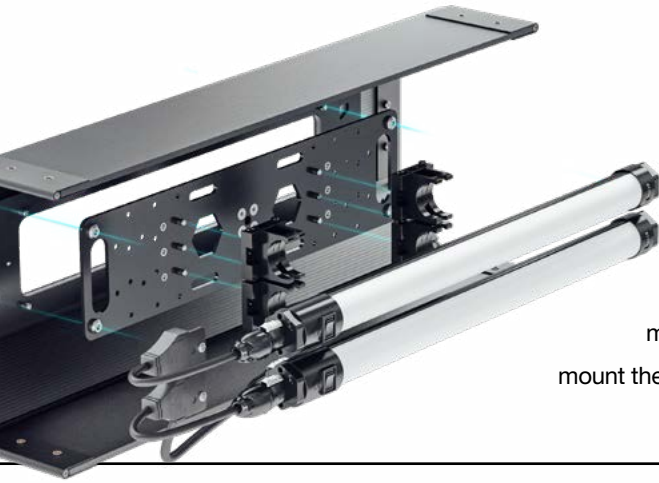

Fluorescent 4-banks belong to the past. Crossfade X Ossium Shells make super wide and super soft, so much smoother. The classic flexible shell for shaping and controlling your light, now with higher output, tunable color temperature and mounting that's simple and secure with no pesky ballast.

- Control shape and spill with articulated Shell
- Secure tubes quickly into a bank using Ossium Plate
- Ossium Baby Pin included for rigging
- Includes Crossfade X tubes
- Tunable white light from 2000K to 6000K
- Low profile soft source

## Soft with a slender build

A bank of linear LEDs gives off a beautifully soft wrap of source. Up to 4ft wide and low profile, it brings the glamor of broad soft lighting without demanding extra space or fuss.

# STACKED TO GO FASTER

Solid support from a custom Ossium plate keeps your Crossfades straight and true – this is the last place you want flexibility. Stacking them into a bank is a simple snap in and quick connect power via the included multibank AC adaptor. There’s no separate ballast to eat up rigging time, just mount the Ossium Baby Pin to the back to make your Ossium Shell clamp ready.

# SHAPE UP AND TAKE CONTROL

Take control of your source with the flexible Shell. As beautiful as it is, sometimes soft light needs to be put on a leash. The Shell gives control over shape and spill using articulating doors, holding any position you choose. For ultimate control add an optional 40° Eggcrate.

# THE POWER OF MANY ACTING AS ONE

Light the way you want with a large, tunable fixture that has an alter ego as individual tubes. The Crossfade X brings simple, broad spectrum, tunable white light from a beautifully warm 2000K to a crisp 6000K. It’s also compatible with most AC TRIAC dimming systems for any easy plug and play light. Is the Ossium Shell a huge soft source or a tool for your tubes? We guess that depends on where the day takes you.
